

Imagaro professional Z

FEB 2007 EDITION

Technical Specifications

Imagaro professional Z Feb 2007 edition is developed for both Mac OS X and Windows and will import graphics from and export to most popular graphics software (To and from Adobe Illustrator and Corel Draw you can move graphics with one click).

Identify more than 45,000 fonts from different typeface collections.

Import/open file formats:	PICT, PSD, BMP, DIB, TIFF, GIF, JPEG, PBM, PCD, PCX, PGM, PNG, PPM, TGA, AI, EPS, DXF, CGC and IMZ.
Scanning:	TWAIN 32 support for scanners.
Export/save file formats:	EPS, AI, HPGL (PLT), DXF and IMZ.
ClkLink™ one click import & export:	To and from Corel Draw & Illustrator.
Bitmap to vector conversion:	Outline, centerline, combiline & photo tracing of color, grayscale or black/white images.
Editing:	Comprehensive object and node editing.
Transformations:	Graphics transformations: size, scale, position, mirror, rotation, skewing etc.
Alignment:	Align groups or graphic objects to each other.
Straighten image tool:	If the image is not placed straight in the scanner, this tool can fix it.
Intelligent shape tools:	Copy repeated shape, one click conversion to circles, ellipses, squares etc.
Welding:	Weld graphics such as script texts etc.
Smart editing tools:	Fix corners and lines into right angles or copy angle for parallel lines.
Clean up tool:	Removes redundant nodes and inserts new in the right places.
Drawing tools:	Circle, ellipse, square, rectangle pen tool.
Views:	Original image can be viewed in background.
Editing & layout aid:	Rulers, grid and "magnetic" guide lines.
Routing & engraving fills:	Adjustable for tool size and overlap.
FontEye™ -typeface identification:	The FontEye™ tool can identify the typeface in almost any text. Even fonts in stretched and compressed texts are recognized.
FontEye™ font databases:	More than 45,000 identifiable fonts in typeface collections from Adobe, Linotype, URW, Bitstream, Southern Software, IMSI, SoftKey, Expert Software, Swfte, Greenstreet, RomTech, Image Fonts, Flexisign and Corel.
Create own font databases:	Make your own searchable FontEye™ databases from your own typeface collections or installed fonts in your computer.
Text replacement:	Replace scanned text using the correct font. (Typeface replacement is only possible if you own the font.)

Some features are specific to the Mac OS X and others to the Windows version.
